Introduction

PRISM is the growth desk for a salon. Joy answers every lead in under a minute, day or night, and books them in. Dash tells the owner in plain English which marketing fills chairs and what to do next. It sits on top of the booking system the salon already uses.

The identity has the same job as the product: make a busy business feel calm and exact, with one clear next step.

prismai-app.netlify.app

Prism

Every lead answered. Every dollar traced.

Brand logo

The logo pairs the mark, a hexagon of light split into teal and tangerine facets, with a Gloock wordmark. Use the full lockup wherever the name has to be read.

The gap between mark and wordmark is x. Keep 2x clear on every side, and keep the gap fixed at every size.

The mark

A hexagon cut into six facets around a downward triangle of white light: the prism that names the product. Teal and Mist carry the cool side, Tangerine the warm base.

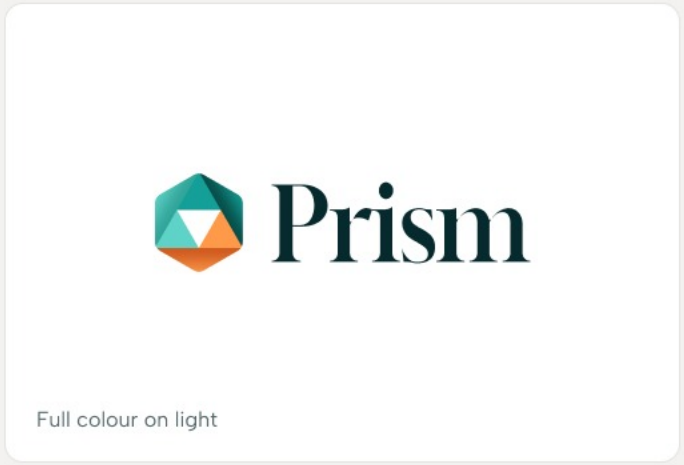

Use the mark alone where the name is already present: the app icon, avatars, the browser tab. Keep half the mark’s width clear around it.

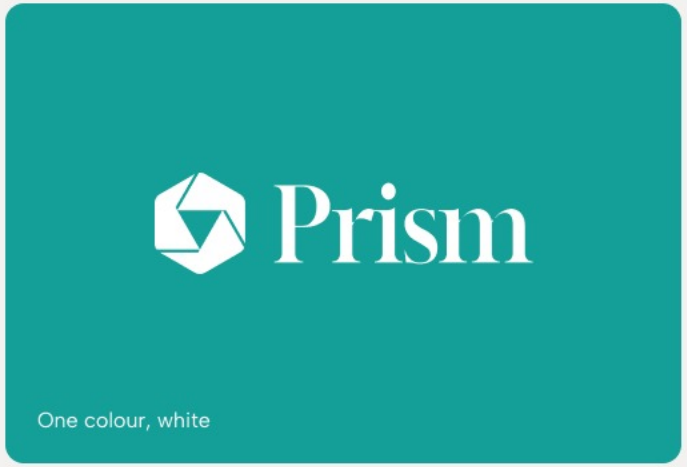

Logo variations

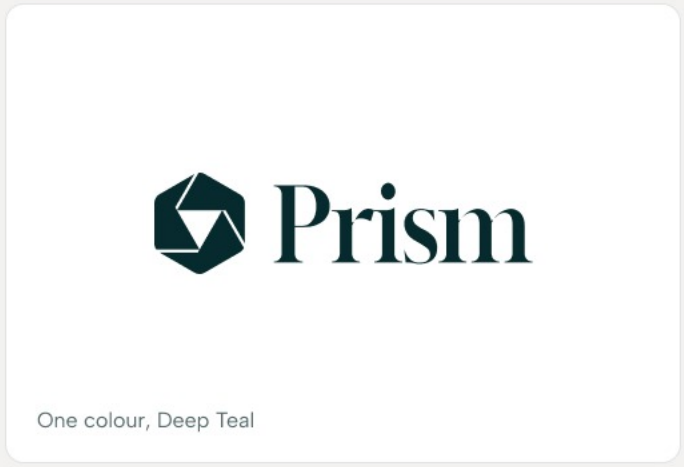

Full colour is the default, on Paper, white or Deep Teal. Switch to one colour, white or Deep Teal, when the ground is a brand colour or a photograph, or when print allows a single ink.

A stacked lockup is in the kit for square spaces.

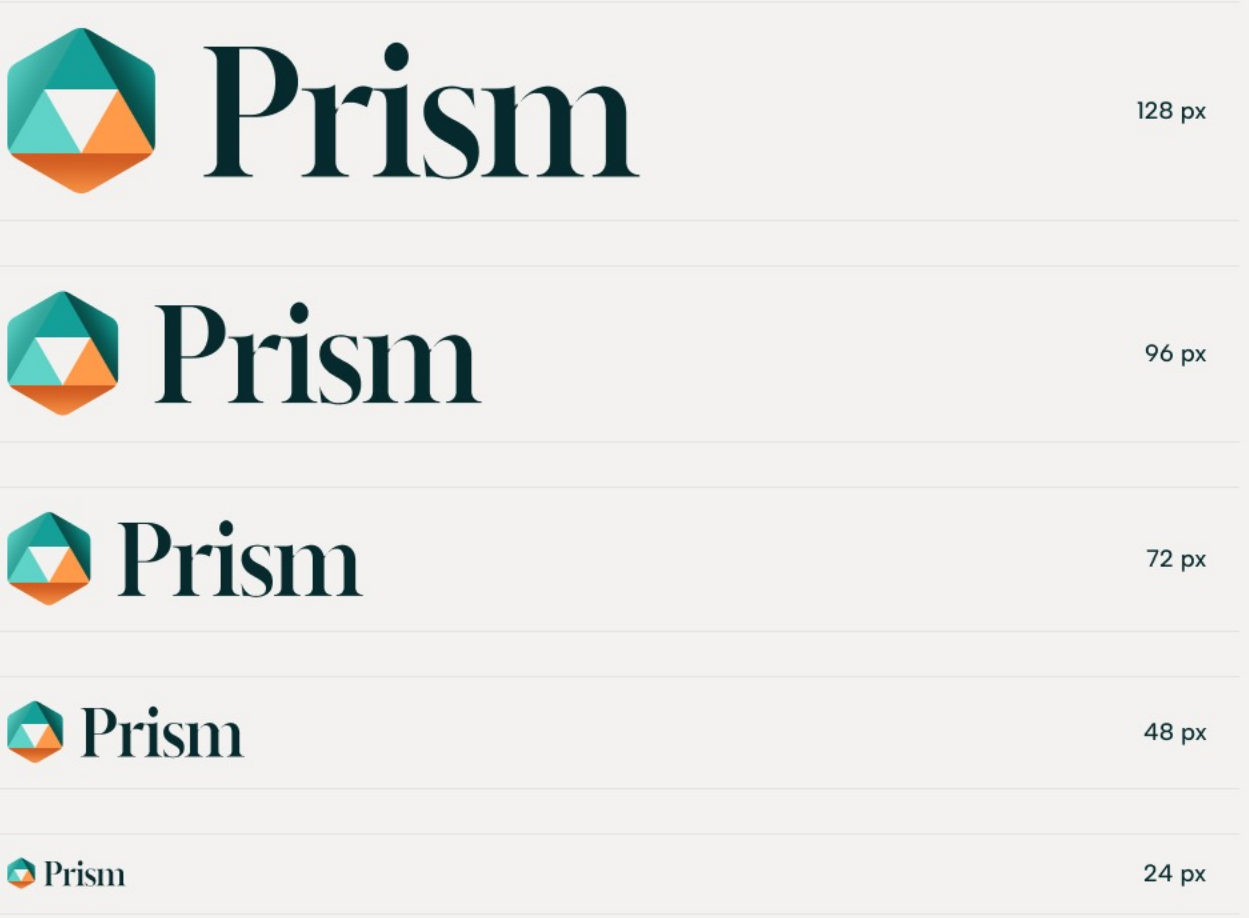

Size and scale

The lockup holds from billboard to browser tab because the wordmark and mark scale together and the gap never changes.

Smallest lockup: 24 px tall on screen, 8 mm in print. Below that, use the mark on its own, down to 16 px.

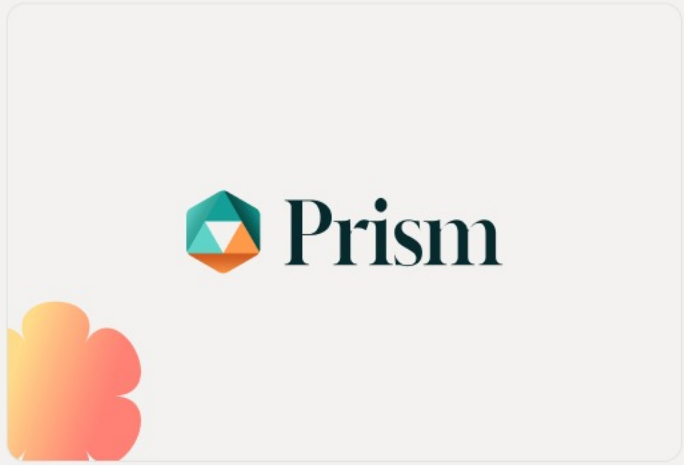

Logo on backgrounds

Pick the version by the ground. Full colour on Paper, Mint and Deep Teal, including the lattice as long as its facets stay clear of the logo. One-colour white on Teal.

Never set the logo on Tangerine: that colour belongs to the action button.

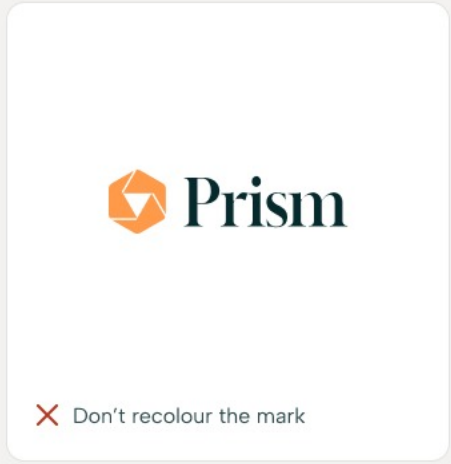

Logo misuse

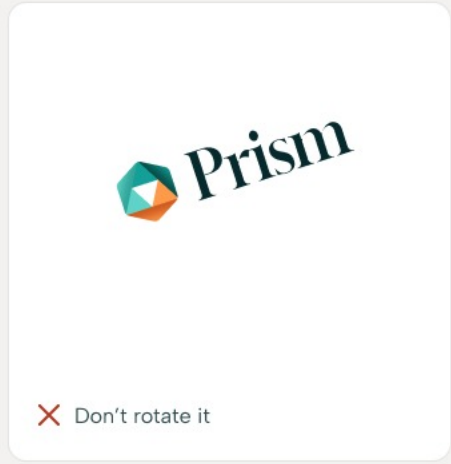

The logo is supplied as finished artwork. Place it from the kit; never redraw, rebuild or retouch it.

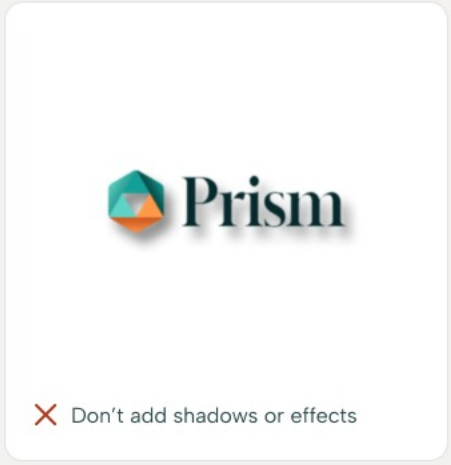

✕ Don’t stretch or squash it

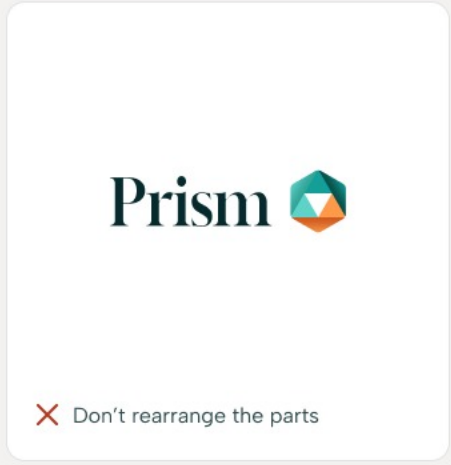

✕ Don’t recolour the mark

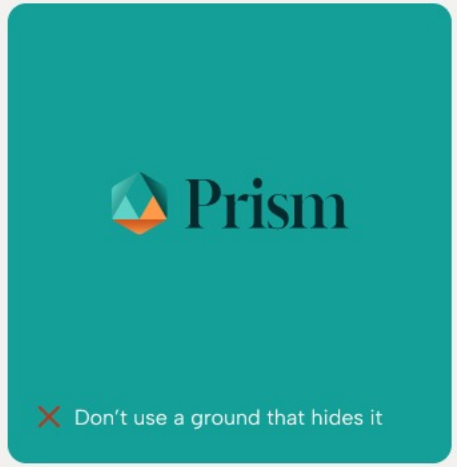

✕ Don’t rotate it

✕ Don’t add shadows or effects

✕ Don’t rearrange the parts

✕ Don’t use a ground that hides it

App icon

On a home screen, in the browser tab and in app stores, the mark sits on a Deep Teal tile. Paper and Teal tiles are alternates for light and brand placements.

Supply the 1024 px master and let the platform apply its own corner mask.

Logo and asset kit

Every asset in this guide ships as SVG, in seven folders: logo, mark, wordmark, app-icon, assistants, icons and graphics. The file name says which version it is: “reversed” is full colour for dark grounds; “white” and “ink” are one colour.

In Figma, the same files are components on the Logo & asset kit page, ready to export as SVG or PNG.

Colour palette

Teal and Tangerine come from the original PRISM hexagon. Deep Teal is the ink and the night ground; Paper is the day ground. Tangerine is held back: it marks the one action on each screen.

Specify colour by HEX on screen. For print, match these on press from a proof before setting CMYK.

Deep Teal
HEX #062A2D
RGB 6 · 42 · 45

Paper
HEX #F4F2F0
RGB 244 · 242 · 240

Teal
HEX #14A098
RGB 20 · 160 · 152

Tangerine
HEX #FF9A4A
RGB 255 · 154 · 74

Supporting colour

Tints and deeper tones do the quiet work: links, the washes behind Joy and Dash, chart series and selected rows.

Keep the balance close to the bar. Most of any page is Paper and white; the brand colours arrive in small, deliberate amounts. Status colours are for status only.

Teal 800	Mist	Mint	Peach wash	Ember	Joy ink	Slate ink
#0B7E79	#5FD3C7	#E9FFFB	#FFF1E5	#C9501A	#8A3F06	#2F4B4D
Links, accent text	Mark facet, third series	Dash wash, selection	Joy wash	Joy accent	Text on Joy wash	Secondary text

Proportion

Paper and white 55% · Deep Teal 25% · Teal 12% · Mist 4% · Tangerine 4%

Data and status

Main series #14A098	Comparison #FF9A4A	Third series #5FD3C7
Good #1F8A5B	Watch #8A5A0B	Needs a person #B4381F

Typography

Albert Sans carries every word in the product and on the site: Medium for headlines, Bold for verdicts and figures, SemiBold for section titles, Regular for reading. It is free from Google Fonts; where it cannot load, fall back to the system sans.

Gloock appears only as the PRISM wordmark, supplied as outlines. It is never set as text.

Type hierarchy

Six steps, taken from the live product. Each screen leads with one plain-English verdict, then the numbers, then the detail.

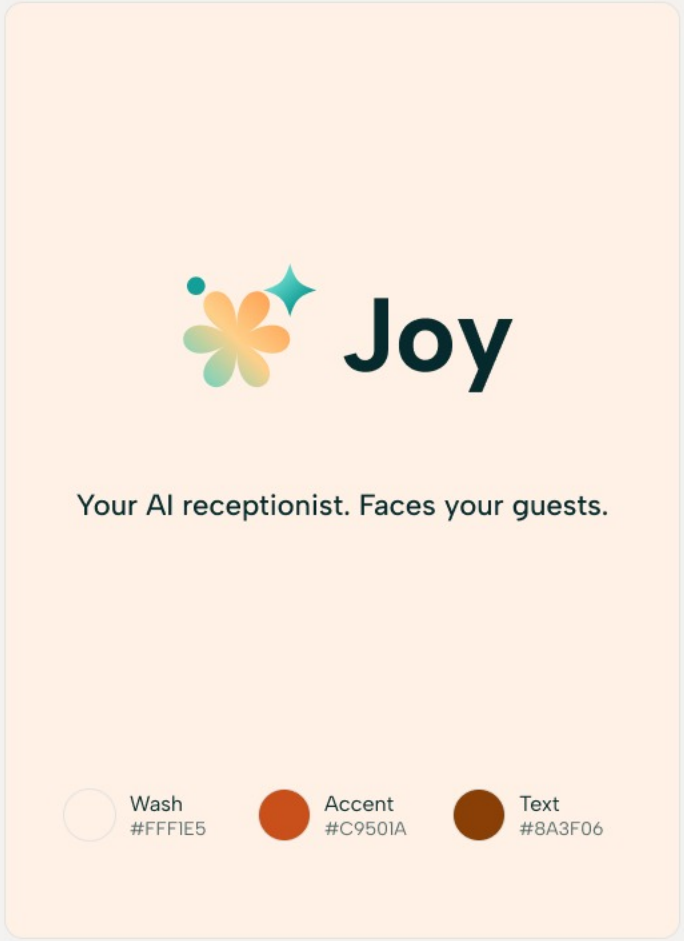

Figures in tables use tabular numerals so columns line up.

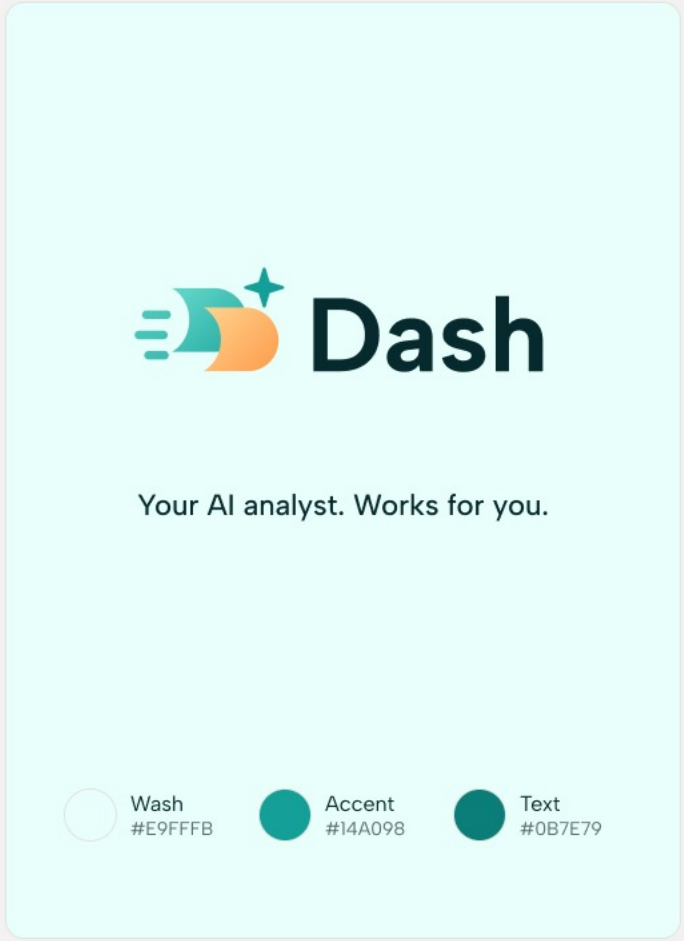

Display Medium · 72 px / 1.0 · −3%	Every lead answered.
Verdict Bold · 34 px / 1.2	**Hold ad spend. 58 leads still wait.**
Figure Bold · 40 px / 1.0 · tabular	**$9,530 $1.60 54 s**
Title SemiBold · 20 px / 1.3	**Do this week**
Body Regular · 16 px / 1.6	Joy answers texts, DMs and web chat in under a minute, day or night.
Label Medium · 13 px / 1.3	Booked per $1 of ads · was $1.81
Wordmark Gloock · outlined artwork only	Prism

Joy and Dash

Two AI helpers, each with its own face. Joy talks to guests, so she is warm: a flower and a spark on a peach wash. She answers texts, DMs, web chat and calls, and books from real open times. Dash talks to the owner, so he leans forward: a quick D on a mint wash. He answers from the salon's own numbers and ends every answer in a button.

Neither is filled with the Tangerine action colour.

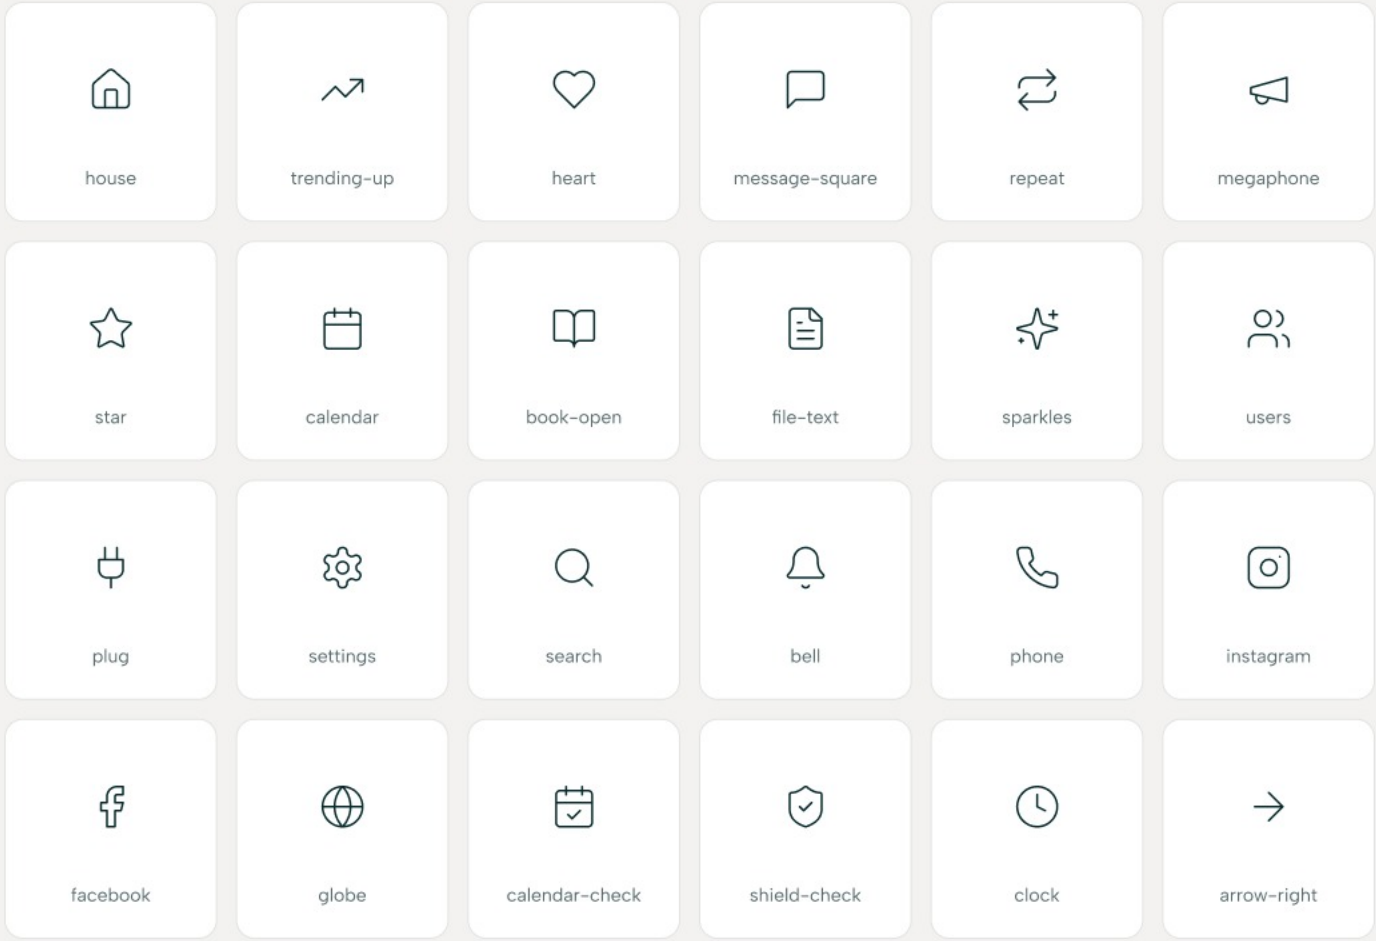

Interface icons

Icons come from Lucide: a 24 px grid, a 2 px stroke and round ends. Use 16 px in dense lists and 20 to 24 px in navigation, in Deep Teal or Slate ink.

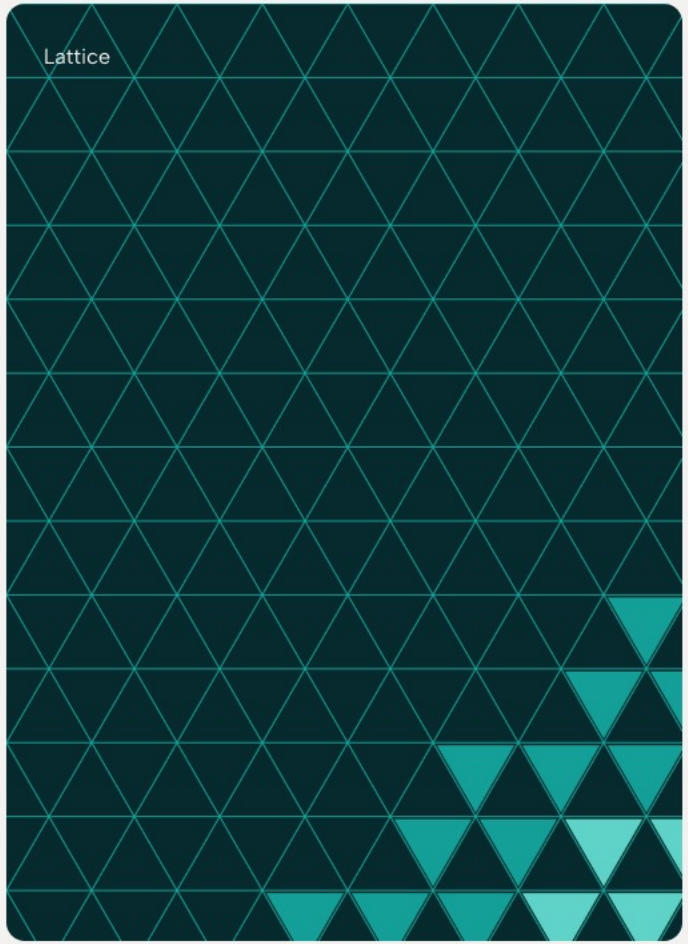

Icons label; they never decorate. Outside the top bar, an icon always sits next to a word.

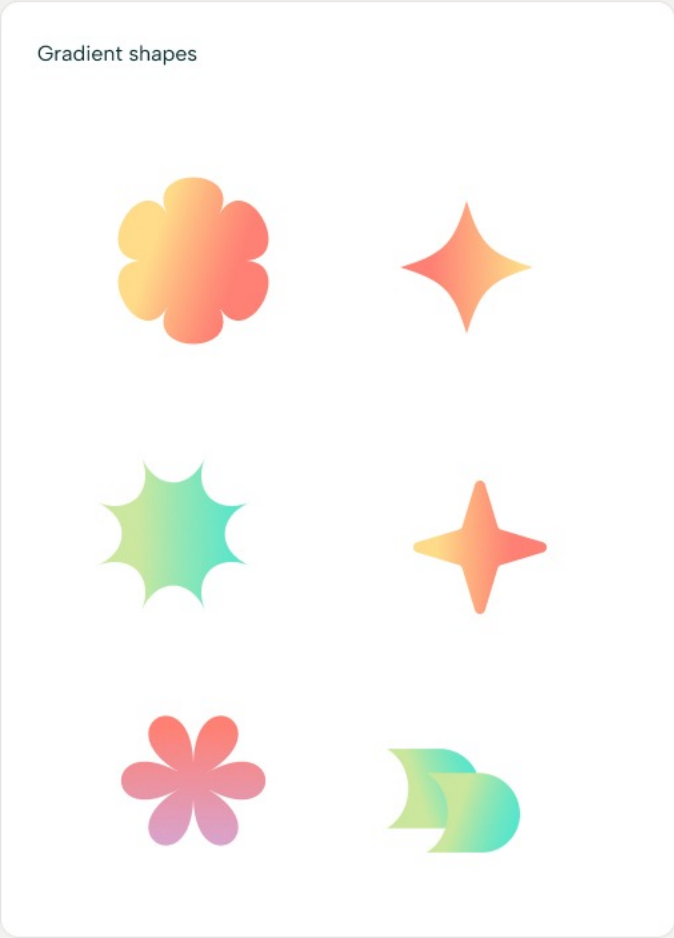

Graphic elements

Two devices, used sparingly. The lattice repeats the mark's triangles: a fine grid with a few filled facets gathered in one corner, always on Deep Teal and never under text.

The soft gradient shapes belong to Joy and Dash. One or two float at the edge of a light page. The lattice and the shapes never share a surface.

Voice

PRISM talks like the best manager at the front desk: plain English, real numbers, one next step. Lead with the verdict, then the number that proves it. Name the person and the money.

Write PRISM in capitals in copy; the wordmark artwork reads Prism. The company is Prism AI Insights, LLC.

Every lead answered. Every dollar traced.

One talks to your guests. One talks to you.

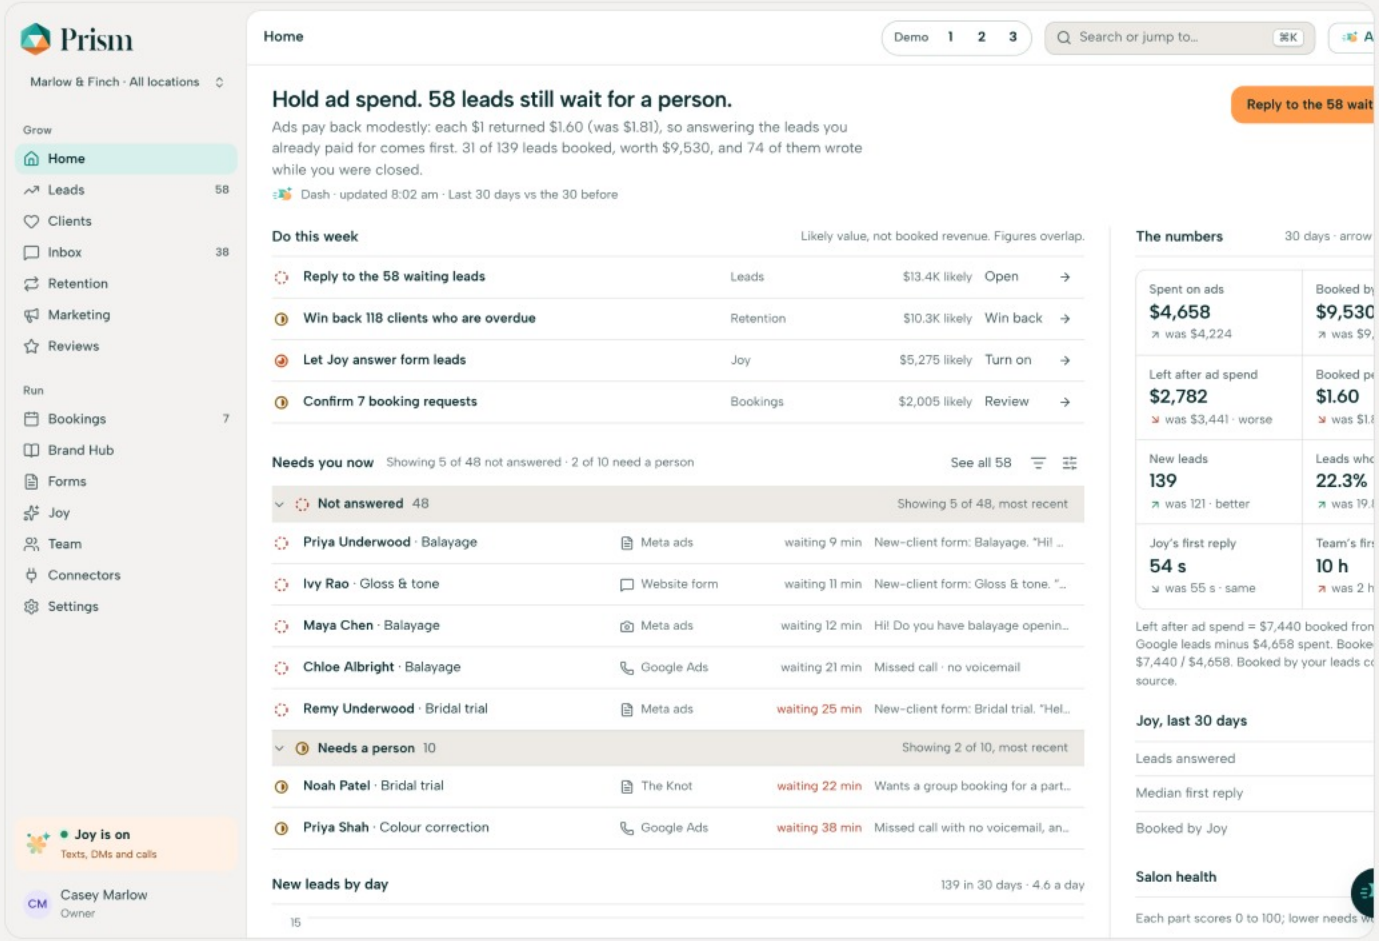

The whole salon on one desk.

We say	We don't say
58 leads still wait for a person.	Unlock AI-powered lead optimization.
Each $1 on ads brought back $1.60 in bookings.	ROAS of 1.6x across paid channels.
Joy handed this to you: she wasn't sure about bridal pricing.	Escalation triggered by low confidence.
Win back 118 clients who are overdue.	Re-engage your churned customer segment.

The dashboard

Home opens with a one-line verdict and a single Tangerine button. Every number shows the last period beside it and means the same thing on every page.

Paper canvas, white working surface, hairlines instead of shadows. Colour appears only where it carries meaning.

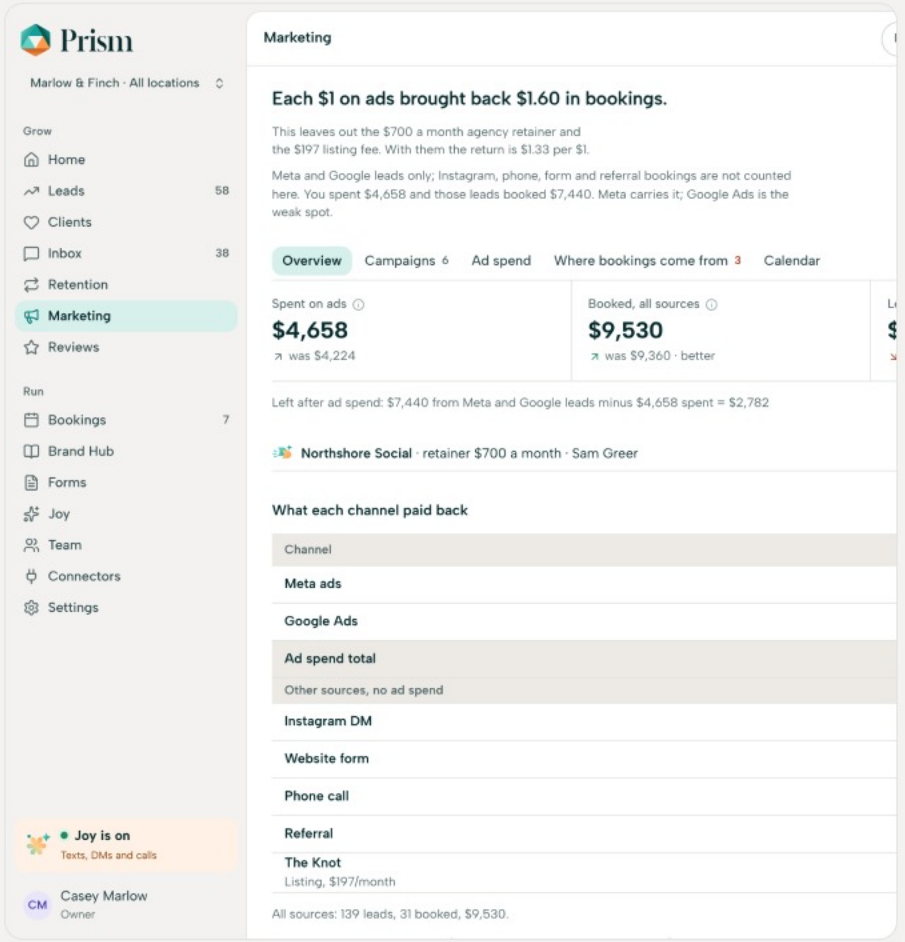

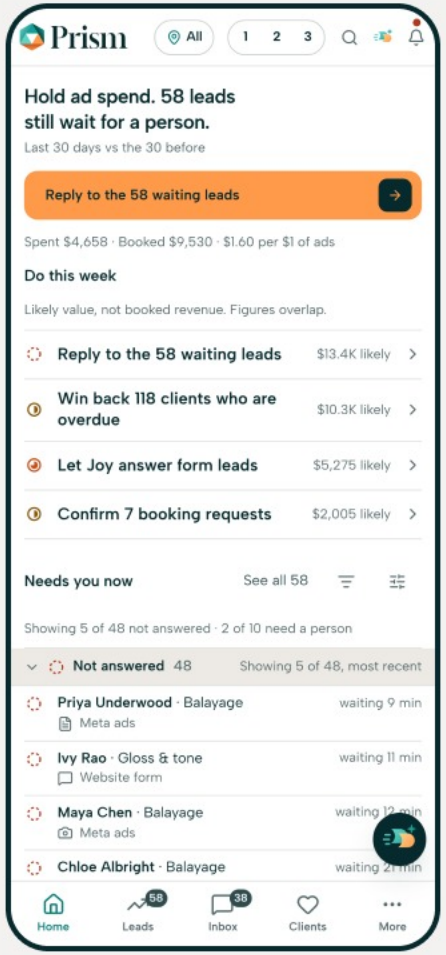

prismai-app.netlify.app

Across devices

Owners check the business on a phone between clients, so the phone has its own layout, not a shrunk desktop: one verdict, one Tangerine button, and a bottom bar for Home, Leads, Inbox, Clients and More.

Touch targets are at least 44 px. Every page works at 390 px wide.

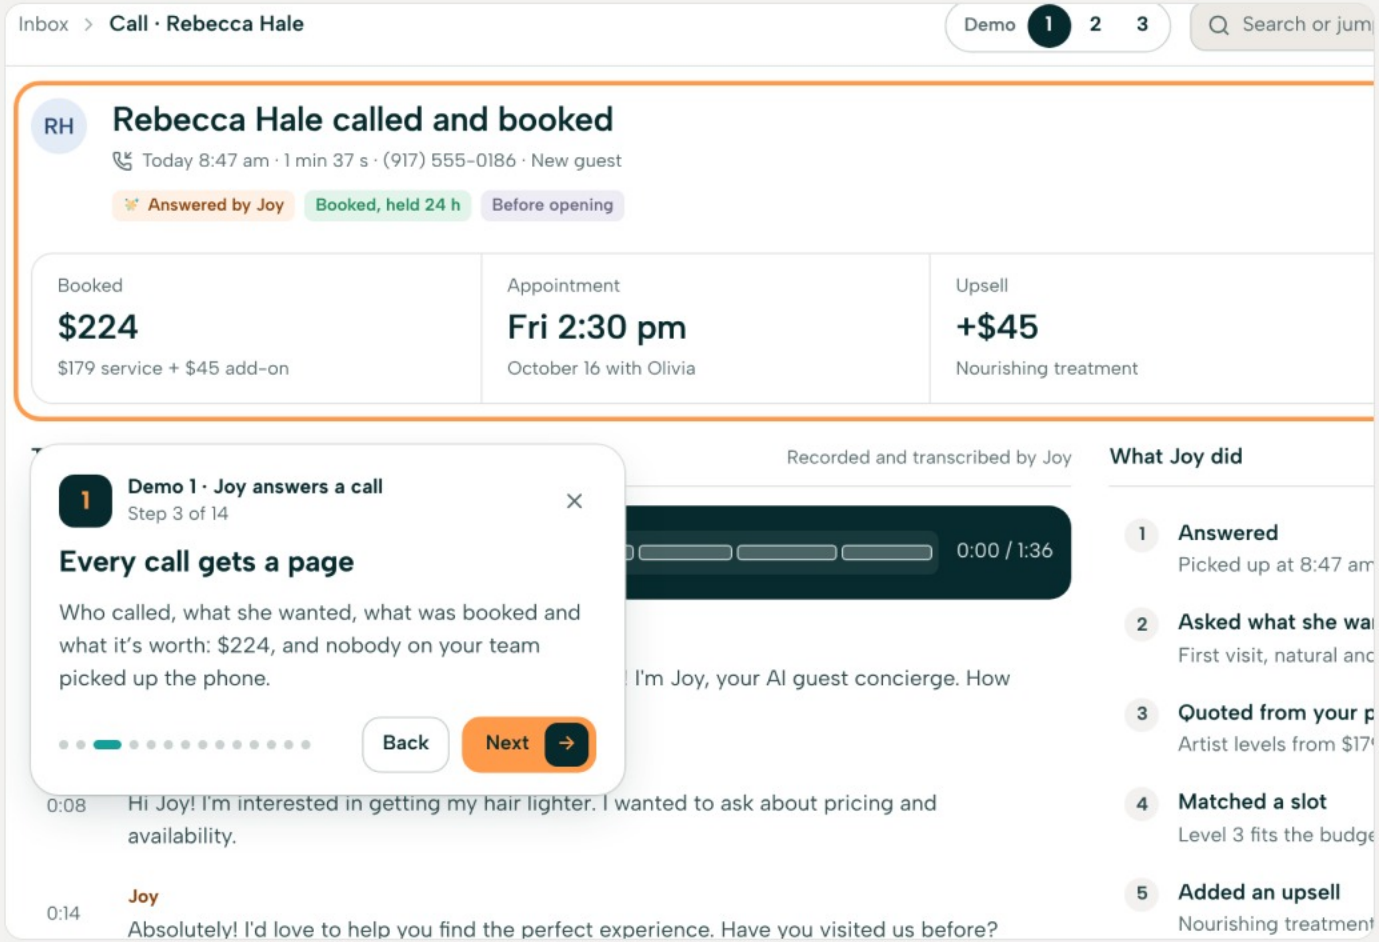

Joy answers a call

Demo 1. Casey, the owner, signs in at 9:41 on a Saturday. At 8:47, before the salon opened, Joy took a call from Rebecca, a first-time guest. She asked what Rebecca wanted, quoted prices from the Brand Hub, matched a budget of about $200 to a Level 3 artist on Friday at 2:30 and added a treatment.

$224 booked, and nobody on the team picked up the phone.

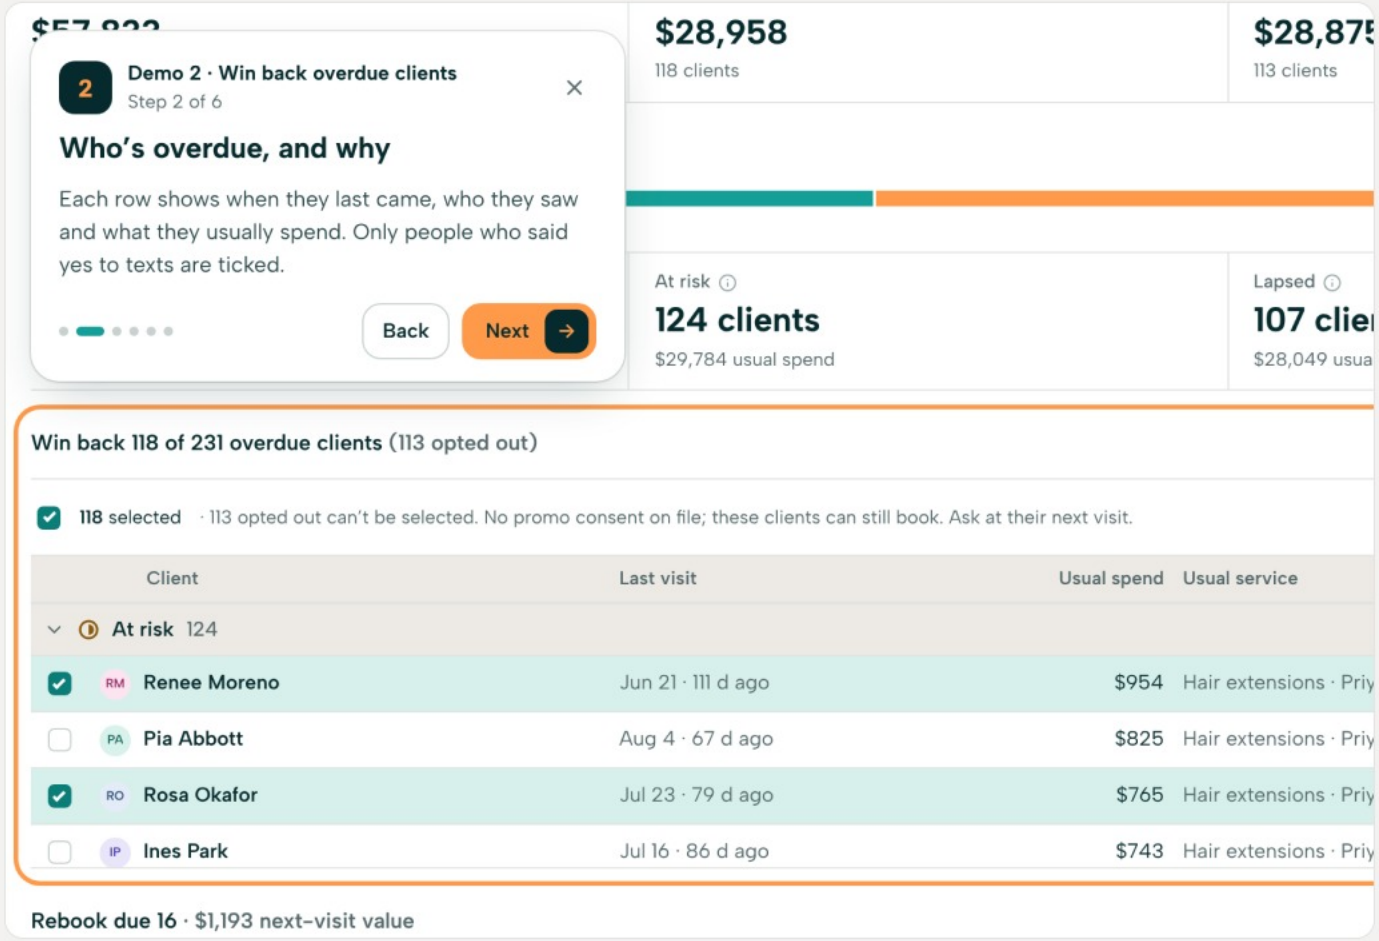

prismai-app.netlify.app

Win back overdue clients

Demo 2. PRISM reads the booking system and finds clients past their usual rebook date: 118 of them, worth $28,958 in next visits.

One tap writes to all of them, each message carrying the client's first name, stylist and last service. Texts go only to clients who said yes, between 10 am and 7 pm, and replies come back to Joy.

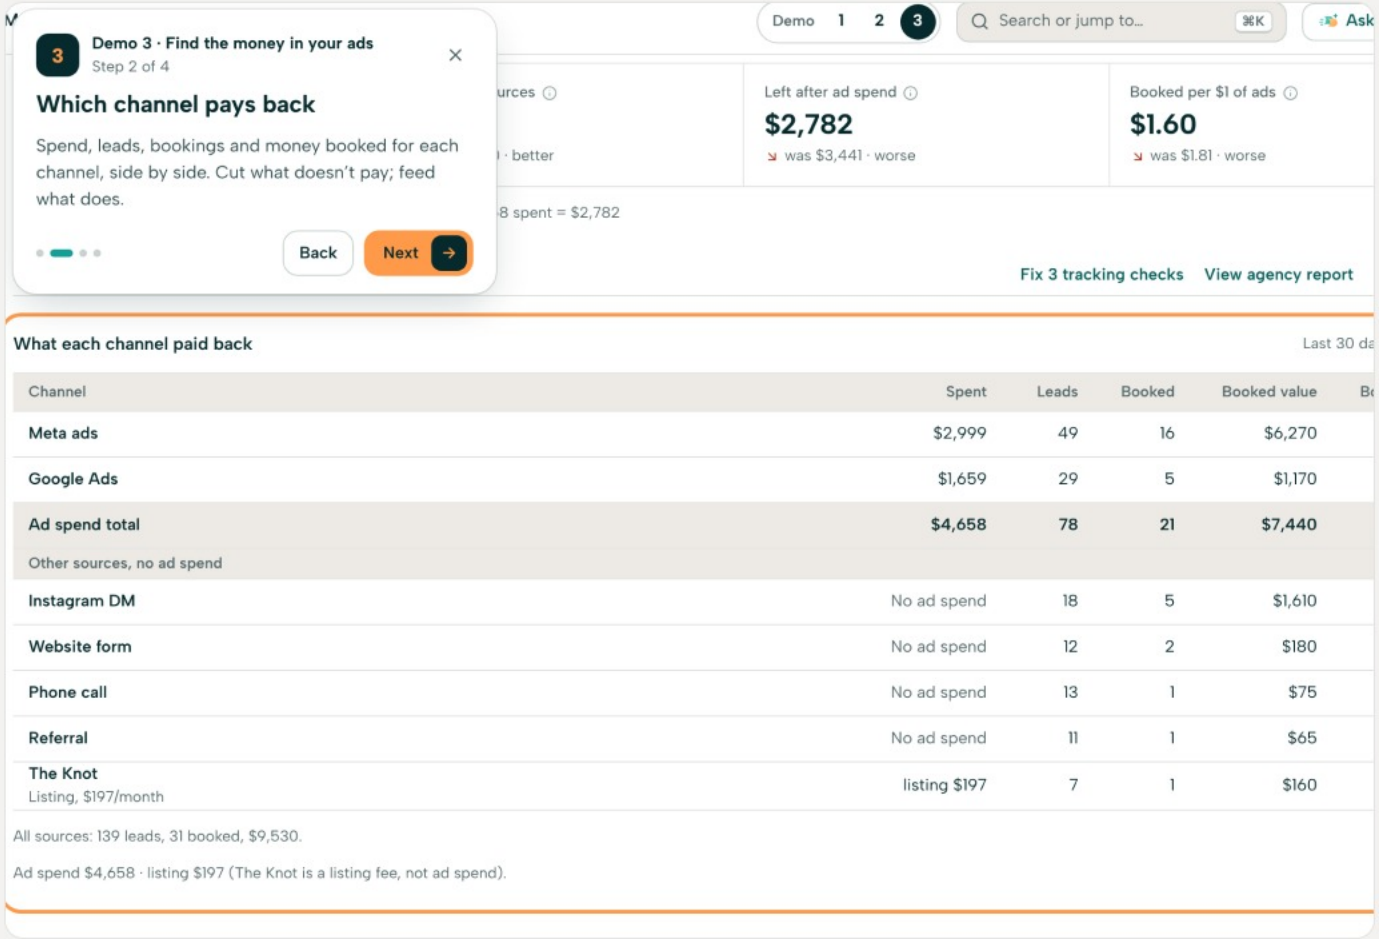

prismai-app.netlify.app

Find the money in your ads

Demo 3. Each $1 on ads brought back $1.60 in bookings, counted from real appointments, not clicks. Meta returns $2.09 a dollar; Google Ads returns $0.71.

PRISM sets the agency's retainer against what its campaigns booked, and Dash answers "Which channel pays back best?" in plain words, with the next move.
